# Digital transformation is not all about disruption

It allows for tremendous gains in efficiency, quality and flexibility in existing value chains

The biggest potential is at the interface of value chains as it becomes easier to link them

The risk of being disrupted depends on someone getting between you and your customer

There's no chance that the iPhone is going to get any significant market share. No chance.

Steve Ballmer

# Digital transformation challenges old industries

A shift in gaining knowledge: machine learning replaces causality through correlation – at least partly

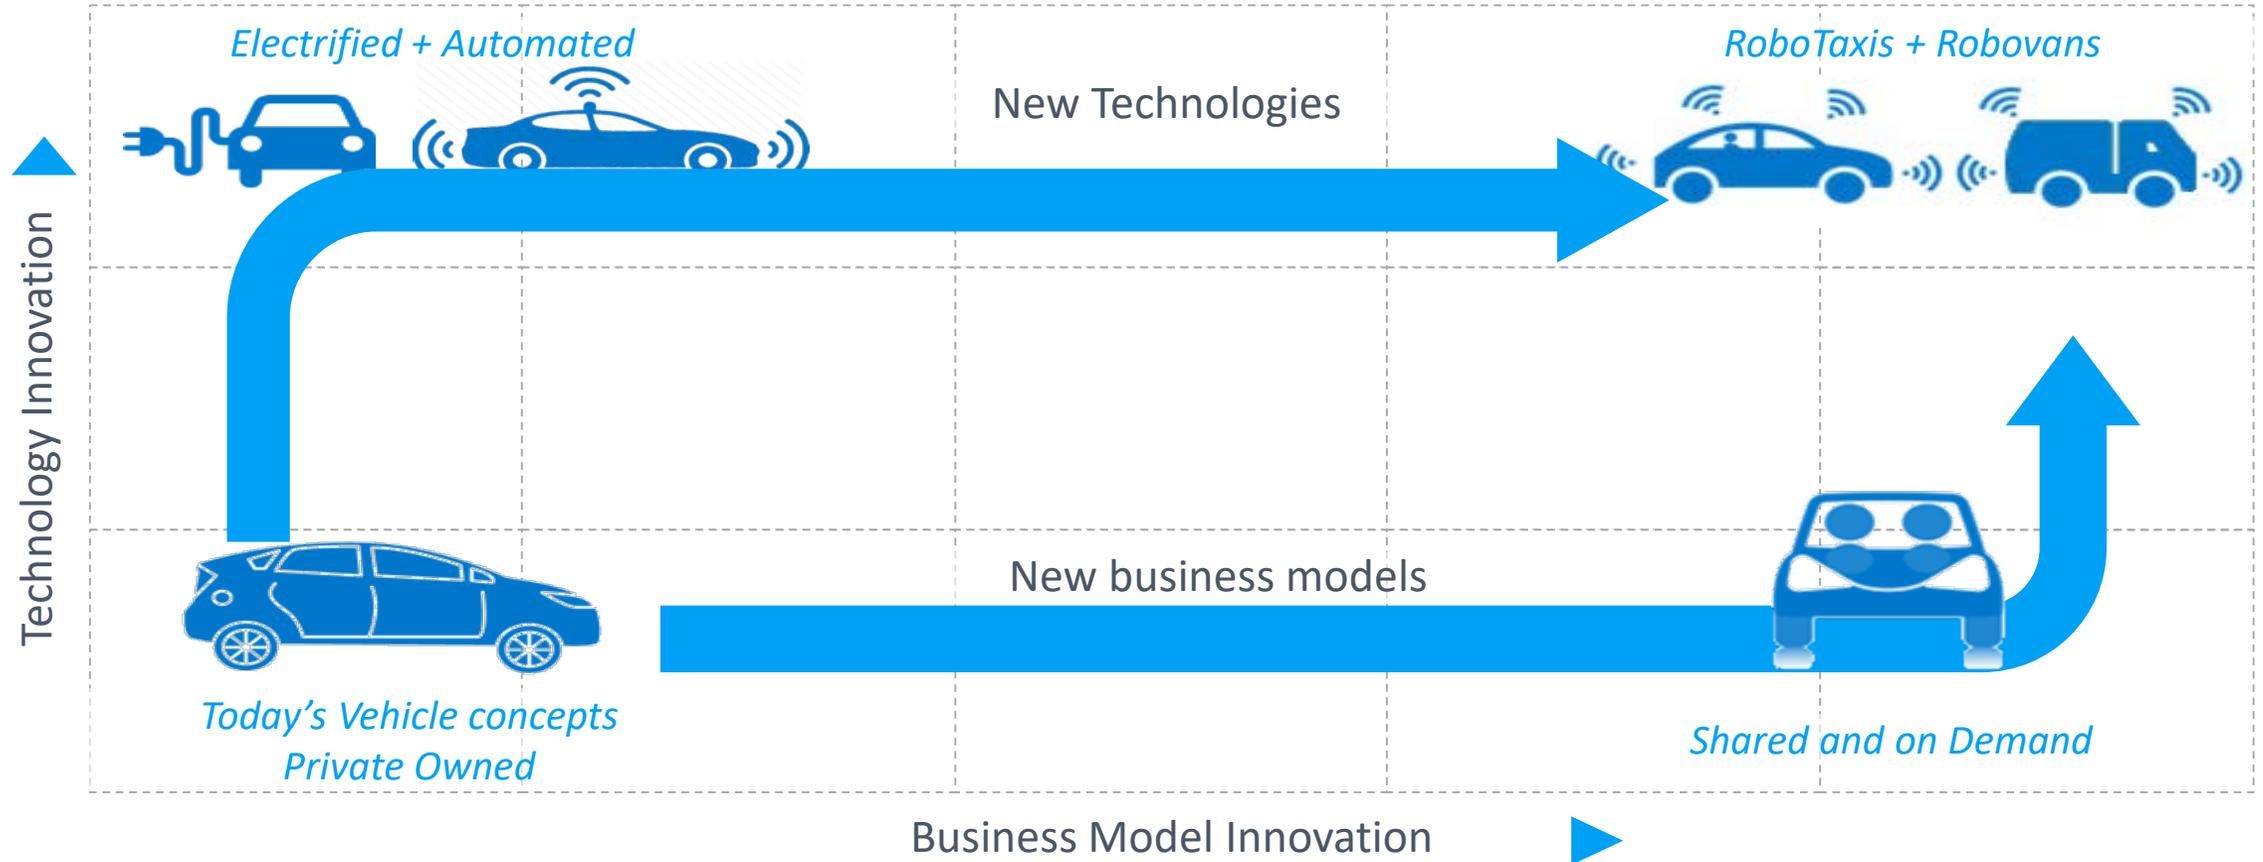

Knowledge gets commodified: pure know-how is not a competitive advantage anymore

# The car of tomorrow will be electrified, connected and autonomous

Digitalization conquers automotive

New car concepts centered around "self-driving systems"
